

STUDENT REGISTRATION ANALYSIS REPORT

Data Insights from Student Registration Records

Prepared by: Samuel Oyedokun | Report Date: May 2026

1. INTRODUCTION

This report presents a comprehensive analysis of the Student Registration dataset containing 40 registered students across 8 distinct courses. The objective is to identify enrollment patterns, course preferences, demographic trends, and actionable insights that can inform future cohort planning and marketing strategies.

2. DATASET OVERVIEW

The student registration data contains the following fields:

COLUMN	DATA TYPE	DESCRIPTION
ID	Number	Unique student identifier
NAME	Text	Full name of the registered student
COURSE	Text	Course the student enrolled in
GENDER	Text	Student gender (MALE / FEMALE)
AGE	Number	Age of the student at registration
DATE	Date	Date of registration

3. STUDENT REGISTRATION REPORT

ID	NAME	COURSE	GENDER	AGE	DATE
1	CHIDI OBI	DATA ANALYSIS	MALE	20	1/5/2026
2	AMAKE OKAFOR	WEB DEVELOPMENT	FEMALE	21	3/5/2026
3	SEUN AJIBOLA	DIGITAL MARKETING	MALE	24	9/5/2026
4	NANA HAWA	DATA ANALYSIS	FEMALE	25	4/5/2026
5	MIKE OPARA	FRONT END DEVELOPER	MALE	23	3/5/2026
6	OKE PAUL	BACK END DEVELOPER	MALE	20	4/5/2026
7	JOHN PAUL	UI/UX DESIGN	MALE	22	5/5/2026
8	DORCAS OJO	VIDEO EDITOR	FEMALE	26	5/5/2026
9	CHIOMA IGWE	DATA ANALYSIS	FEMALE	27	2/5/2026
10	BOLA BELLO	FRONT END DEVELOPER	FEMALE	23	8/5/2026

11	SAMUEL SMITH	UI/UX DESIGN	MALE	21	7/5/2026
12	JERRY KUDABO	DATA ANALYSIS	MALE	22	7/5/2026
13	ISREAL ADEBAYO	DIGITAL MARKETING	MALE	25	6/5/2026
14	JOSHUA OYE	VIRTUAL ASSISTANT	MALE	24	5/5/2026
15	DANIEL SEGUN	DATA ANALYSIS	MALE	20	3/5/2026
16	JAMES OLA	UI/UX DESIGN	MALE	23	1/5/2026
17	KUNLE THOMAS	VIRTUAL ASSISTANT	MALE	27	5/5/2026
18	AISHA TAOFEQ	VIDEO EDITOR	FEMALE	27	4/5/2026
19	ABU SAMBO	FRONT END DEVELOPER	MALE	23	5/5/2026
20	DIKO MALLAM	WEB DEVELOPMENT	MALE	25	2/5/2026
21	UGO WILLIAM	DATA ANALYSIS	MALE	22	2/5/2026
22	CHIDOHI JAMES	BACK END DEVELOPER	MALE	24	3/5/2026
23	GRACE ADE	BACK END DEVELOPER	FEMALE	26	4/5/2026
24	JOHN PHILIPS	DATA ANALYSIS	MALE	21	9/5/2026
25	BIDEMI FEMI	DIGITAL MARKETING	FEMALE	20	8/5/2026
26	SAM OYE	VIDEO EDITOR	MALE	28	7/5/2026
27	OLA AINA	WEB DEVELOPMENT	FEMALE	24	5/5/2026
28	LEKAN BADMUS	DATA ANALYSIS	MALE	22	3/5/2026
29	JIDE KOSOKO	FRONT END DEVELOPER	MALE	23	5/5/2026
30	PETER OKOYE	DATA ANALYSIS	MALE	26	4/5/2026
31	DAPO DADA	DIGITAL MARKETING	FEMALE	20	7/5/2026
32	FAITH DAIKWO	DATA ANALYSIS	FEMALE	21	4/5/2026
33	ANIBE GIFT	VIDEO EDITOR	FEMALE	22	5/5/2026
34	MONICA NICO	VIRTUAL ASSISTANT	FEMALE	23	1/5/2026
35	EMMANUEL EZE	WEB DEVELOPMENT	MALE	24	3/5/2026
36	BUKAYO SAKA	BACK END DEVELOPER	MALE	25	2/5/2026
37	TUNDE BABA	DATA ANALYSIS	MALE	27	6/5/2026
38	FATIMA BELLO	FRONT END DEVELOPER	FEMALE	26	8/5/2026
39	AISHA MOHAMMED	VIDEO EDITOR	FEMALE	21	4/5/2026
40	NGOZI NWANKWO	VIRTUAL ASSISTANT	FEMALE	20	9/5/2026

4. COURSE REGISTRATION COUNT

The table below shows the number of students registered per course, sorted from highest to lowest enrollment:

S/N	COURSE	COUNT	% OF TOTAL
1	DATA ANALYSIS	11	27.5
2	FRONT END DEVELOPER	5	12.5
3	VIDEO EDITOR	5	12.5
4	WEB DEVELOPMENT	4	10.0
5	DIGITAL MARKETING	4	10.0
6	BACK END DEVELOPER	4	10.0
7	VIRTUAL ASSISTANT	4	10.0
8	UI/UX DESIGN	3	7.5
	TOTAL	40	100%

5. KEY INSIGHTS & OBSERVATIONS

DATA ANALYSIS MOST POPULAR COURSE	11 students enrolled — representing 27.5% of total registrations. This is more than double any other individual course, confirming strong market demand for data skills.
60% / 40% GENDER DISTRIBUTION	24 Male students (60%) vs 16 Female students (40%). There is a gender gap in enrollment, particularly in technical courses like Back End Development and Data Analysis.
23.3 yrs AVERAGE AGE	Students range from 20 to 28 years old. The majority fall between 20–24 years, suggesting the program largely attracts young adults and recent school leavers.

6. RECOMMENDATIONS

- Scale up DATA ANALYSIS, open additional cohorts to meet demand. At 27.5% of all registrations, this course leads by a wide margin and has room to grow.
- Improve female enrollment by introducing targeted outreach, scholarships, or ambassador programs to raise female enrollment from 40% towards gender parity.
- Boost courses that have low student intakes such as UI/UX Design. Consider refreshing their content, adding testimonials, or bundling them with popular courses.
- Track daily and monthly trends continuously. Set up a dashboard to monitor registrations daily and monthly. Early visibility into drops or spikes allows proactive intervention.

7. FACILITATOR SECTION — HOW TO APPROACH DATA ANALYSIS

7.1 How the Data Was Approached

The dataset was first reviewed to understand its structure such as, identifying columns (ID, NAME, COURSE, GENDER, AGE, DATE) and the 40 records it contained. Each column was categorized by type: numeric (ID, AGE), text (NAME, COURSE, GENDER), and date (DATE). This allowed targeted analysis for each variable type.

Key analytical steps taken:

- Counted total registrations and confirmed 40 unique students.
- Grouped students by COURSE to find enrollment frequency per course.
- Sorted results to rank from highest to lowest.
- Calculated the percentage share of each course out of 40.
- Segmented by GENDER to compare male vs female participation.
- Analyzed AGE distribution to identify the most common age groups.
- Converted DATE fields to identify daily registration trends.
- Identified patterns and translated them into actionable observations.

7.2 How Results Were Interpreted

Results were interpreted by looking for patterns and comparisons. For example:

DATA ANALYSIS with 11 enrollments versus the next two courses (Front End Developer and Video Editor) at 5 each shows a clear leader and not just a marginal difference. This signals genuine market preference.

The majority of students fall between 20–24 years, suggesting the program largely attracts young adults and recent school leavers.

The gender split (60% Male, 40% Female) is noteworthy because it can highlight a structural gap in outreach to female learners, especially in technical disciplines.

Low enrollment in some courses such as UI/UX Design.

7.3 How to Teach a Beginner to Think with Data

Teaching data thinking to a beginner requires making the abstract concrete. The following five-step framework works well:

STEP 1 — Ask a Question

Always begin with a question. e.g. 'Which course do most students choose?' or 'Are more males or females signing up?' The question gives your analysis direction and purpose. Data is the tool to answer real questions.

STEP 2 — Collect and View the Data

Look at the raw data first without making assumptions. Read through the table. Notice columns, count rows. Understand what each field means.

STEP 3 — Organise and Count

Group similar data together. Count how many students are in each course, each gender, each age group. Sorting and grouping is the core skill of early data analysis.

STEP 4 — Spot a Pattern or Difference

Ask: What stands out? What is unexpectedly large or small? In this dataset, DATA ANALYSIS immediately stands out — 11 students vs 4 to 5 for all others. That gap is meaningful.

STEP 5 — Visualize to Understand

A chart tells a story at a glance. Show learners how a chart reveals patterns that a table hides.

STEP 6 — Draw a Conclusion and Recommend

Turn your observation into a statement: 'Students prefer Data Analysis because it aligns with growing industry demand.' Then recommend an action: 'Open a second Data Analysis cohort next quarter.'

8. CONCLUSION

The student registration dataset reveals a vibrant but uneven enrollment landscape. DATA ANALYSIS dominates as the course of choice, male students outnumber female students, and the majority of learners are young adults aged 20–24. The peak registration period on 5th of May 2026 offers a clear opportunity for timed marketing campaigns.

By acting on these findings such as, scaling popular courses, addressing gender gaps, and timing promotions strategically, the organization can significantly improve both reach and impact. Data-informed decisions are not a luxury; they are the foundation of sustainable growth.
